AI-BASED SYSTEM PERFORMANCE ANALYZER - PERFORMANCE REPORT

Report Generated: 2026-02-22 22:50:20

Total Data Points Analyzed: 283

EXECUTIVE SUMMARY

This report analyzes system performance metrics including CPU, RAM, and Disk usage over the monitoring period. The analysis includes peak usage detection, risk

assessment, and optimization recommendations.

SYSTEM METRICS SUMMARY

CPU USAGE:

- Average CPU Usage: 27.42%
- Peak CPU Usage: 100.00%
- Peak CPU Time: 2026-02-22 22:42:36
- High CPU Periods (>85%): 5 occurrences

RAM USAGE:

- Average RAM Usage: 55.71%
- Peak RAM Usage: 60.90%
- Peak RAM Time: 2026-02-22 22:50:16
- High RAM Periods (>80%): 0 occurrences

DISK USAGE:

- Average Disk Usage: 99.80%
- Peak Disk Usage: 99.80%

RISK ASSESSMENT

Critical Overload Periods: 3 occurrences

Risk Level: CRITICAL - Immediate action required

OPTIMIZATION RECOMMENDATIONS

1. CPU OPTIMIZATION:

- Identify and close CPU-intensive applications during peak usage
- Consider upgrading CPU if high usage is consistent
- Check for background processes consuming CPU
- Use task manager to identify resource-heavy applications

3. DISK OPTIMIZATION:

- Free up disk space by deleting temporary files
- Uninstall unused programs
- Move large files to external storage
- Run disk cleanup utility
- Consider upgrading to larger storage drive

AI-GENERATED INSIGHTS

Based on machine learning analysis and pattern recognition:

■■ CRITICAL INSIGHT: System experienced severe CPU overload. This indicates resource-intensive applications or potential system instability.

PREDICTIVE ANALYSIS:

- Based on current patterns, system is at risk
- Recommended monitoring frequency: High (every 1-2 minutes)
